

# Vest Harness User Guide

## To fit the Vest Harness to the pushchair

- Unclip the waist straps from the crotch strap
- Disconnect the shoulder strap from the waist strap – on the Excel Elise the lower end of the shoulder strap slides off in the direction of the crotch strap connector.
- Pass the waist strap through the strap loop under the Vest Harness
- Reconnect the shoulder strap to the waist strap
- Turn the buckle on the vest harness top strap to align with the hole on the front of seat fabric and pass through.
- Repeat on the other side
- The Vest Harness is now 'captive' on the pushchair and will not come off.

*NOTE. It is possible to fit the Vest Harness and completely remove the original standard shoulder straps, but this may affect the security of the child and the Vest Harness can then come off the waist strap each time the harness is opened. Store the shoulder straps somewhere you won't forget.*

## Vest Harness Operation

- Undo the Vest Harness zip to open.
- Fit the standard harness as normal – attach each waist strap to the crotch strap.
- Close the Vest Harness with the zip and velcro tab

**IMPORTANT.** We recommend that the waist straps are clipped into the crotch strap before folding the pushchair to avoid any harness clips being caught in the frame and crushed.
